EDUCATION

NRU Higher School of Economics

B.S. in Applied Mathematics and Information Science

Moscow, Russia

Sep. 2023 – Jun. 2027

- **Relevant coursework:** Probability Theory, Stochastic Analysis, Optimization Methods, Fundamentals of Matrix Computations, Algorithms and Data Structures, Machine Learning.

EXPERIENCE

Yandex, Deep Learning R&D (Self-Driving cars)

February 2026 – Present

- Implement pretraining architectures for autonomous vehicles (cars and trucks).
- Perform extensive data analysis, visualization on real-world driving data.
- Develop and implement sophisticated data sampling strategies to optimize the pretraining phase, improving model convergence and robustness.

Yandex, Machine Learning Engineer (International Ads Ecomm+)

July 2024 – February 2026

- Successfully completed a high-impact project utilizing knowledge distillation techniques to transfer knowledge between large models, enabling the launch of mobile ads from scratch and significantly boosting CTR.
- Developed statistical models predicting conversion probability for real-time bidding (RTB) in international advertising auctions, achieving a 10-15% conversion lift for web ads through A/B testing.
- Designed scalable ETL pipelines to process raw data (e.g., mobile postbacks), optimizing data flow for continuous model training and inference.

OLYMPIADS & ACHIEVEMENTS

- **Codeforces Master** (Max rating: **2174**, Top tier globally): codeforces.com/profile/JustNik77
- **All-Russian Olympiad in Informatics Finalist** (222nd place out of **30,000+** participants).
- **XVII Open Olympiad in Informatics (Silver Medal, 72nd out of 1,000+ participants): Standings**

RESEARCH & PROJECTS

Time Series Dimensionality Reduction & Forecasting

GitHub

- Conducted a comparative mathematical study of classical (PCA, t-SNE, UMAP) and deep learning-based dimensionality reduction techniques on multi-variate time series data.
- Designed and evaluated advanced autoencoder architectures (Neighborhood-Reconstructing, Multi-Chart, Multi-Head) for capturing complex manifold structures in datasets like Lorenz attractors and ETT.
- Demonstrated that geometric-aware autoencoders yield robust embeddings, strictly improving downstream time series forecasting accuracy compared to competitive baselines.

Kaggle Competitions

Kaggle Profile

- **Vesuvius Challenge (Bronze Medal):** Developed a 3D segmentation solution to detect surfaces in 3D X-ray scans of ancient scrolls. Implemented learned vector fields, crafted data sampling pipelines, and improved post-processing algorithms.
- **MABe - Multi-Agent Behavior (Top 20%):** Developed a sequence modeling solution combining LSTMs and Gradient Boosting (GBDT) to classify social behavior in agents based on keypoint time-series data.
- **BirdCLEF (Top 30%):** Designed an audio signal processing and classification pipeline using Mel-spectrograms and EfficientNet-based models.

SKILLS

- **Programming & Tools:** Python, C++, SQL, PyTorch, Git, Linux.
- **Data & Compute:** Pandas, NumPy, SciPy, Polars, ETL Pipelines, High-Performance Computing.
- **Core Expertise:** Algorithms & Data Structures, Time Series Analysis, Statistical Modeling, A/B Testing, Optimization, Deep Learning.
- **Languages:** Russian (Native), English (C1, Advanced).
